## **1 Course Overview**

The first objective of this course is to expose students to basic economic theory governing the determination of the level of wages and employment in the labor market. Thus, the course will begin with the classic models of labor supply and labor demand, and will then address more recent developments regarding job search frictions, discrimination, human capital development, performance incentives, non-wage benefits, and automation.

The second objective of this course is to develop students' ability to test the theories presented in class using labor market data. Thus, considerable attention will be focused on how to formulate an economic model, isolate its testable predictions, and select and transform data so that such predictions can be evaluated.

## **2 Prerequisites**

The prerequisite for this course is Economics 3070 (Intermediate Microeconomic Theory)
